About us

Proxerex™ for men and Ellamuselle™ for women were developed by Alfasigma HealthScience, a company which has dedicated many years of research on carnitine and its role in metabolism and health.

At Alfasigma HealthScience, we believe that food supplements should be supported by strong scientific research and testing. That's why we are committed to taking a scientific approach and applying pharmaceutical-grade quality ingredients and controls to each and every one of our products.

Sexual Health

Sexual dysfunction and low sexual desire are common problems that affect approximately one in five men and even more women at some point in their lives. Causes can be complex and varied – a hectic life, illness, medication or age.

Physical symptoms for women may include pain or discomfort during sex while men may be unable to get or maintain an erection, or to ejaculate. The majority suffer in silence, with only 25% of people with sexual problems seeking help.

Ellamuselle™ for Women and Proxerex™ for Men contain high quality, scientifically proven ingredients designed to give the body targeted nutrients needed to support sexual desire and function.

Ellamuselle™ for Women and Proxerex™ for Men are produced to the highest possible standards, using only top-quality pharmaceutical-grade ingredients and meticulous manufacturing practices.

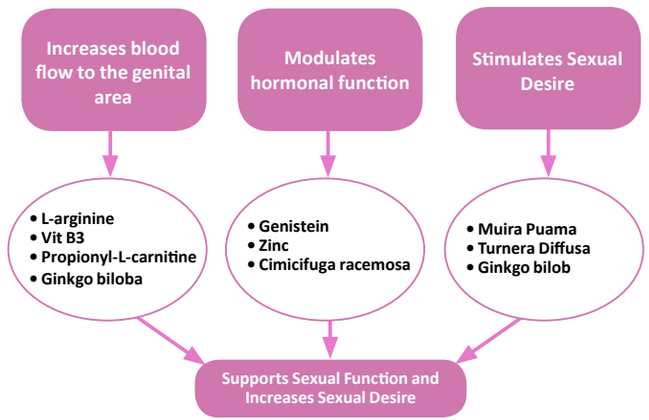

Ellamuselle™: Supports Female Sexual Health

Women's sexual health is important to overall emotional and physical well-being. Low sexual desire is experienced by many women at certain times during their lives, for instance during pregnancy or menopause or at times of crisis, upheaval or illness.

For up to 30% of women, however, low or no sexual desire is constant with little or no interest to initiate or participate in sexual activity. This can impact the physical and emotional well-being of a woman leading to low self-esteem, problems within a relationship and depression.

Ellamuselle™ is a unique, patented formulation with specific ingredients that target the psychological as well as the physiological mechanisms that underlie the complex process of sexual desire and function.

Ellamuselle™: Multifunction Ingredients System

Proxerex™: Supports Erectile Function and Sexual Desire

Erectile dysfunction (ED) is one of the most common sexual problems, affecting more than 50% of men aged 40 - 70 years. In addition, 40% of men with erectile dysfunction also have a marked reduction in sexual desire.

Male sexual arousal and erectile function are complex processes. Research on erectile physiology has led to the knowledge that ED is predominantely a disease of vascular origin and that endothelial dysfunction plays an integral role in its occurance.

Proxerex™ is a unique, patented food supplement with clinically proven ingredients that have been shown to support erectile and endothelial function as well as to increase sexual desire.

Proxerex™: Multifunction Ingredients System
